SKILLS

- AWS (EC2, S3, RDS, IAM, EKS), Azure.
- Docker, Kubernetes, ECS, EKS.
- Terraform.
- Jenkins, GitHub Actions, Bitbucket Pipelines.
- Datadog, Sumologic.
- PagerDuty, Jira, Salesforce.
- IAM, Security Groups, VPN, system hardening.
- Linux (RHEL, CentOS).
- Scripting: Python, YAML.

CERTIFICATIONS

- Red Hat 7 Certified Engineer
- 2x AWS Certified Solution Architect & DevOps - Professional
- CKA -K8s-Certified
- Terraform Associate
- Guidewire ClaimCenter Specialist.

PROFILE

Technical Lead and Cloud Infrastructure Engineer with 8.5+ years of experience supporting large-scale AWS and Kubernetes environments. Proven expertise in cloud operations, customer escalations, production support, automation, cost optimization, and platform reliability. Experienced in leading technical teams, mentoring engineers, and driving operational excellence across mission-critical SaaS platforms.

WORK EXPERIENCE

Guidewire Software — **2021 - PRESENT**

Senior Platform Support Engineer, Tech Lead

- Served as the Aurora Database Subject Matter Expert (SME), leading critical customer database upgrades, migration activities, and data integrity validation across production environments.
- Acted as the primary technical escalation point for complex cloud platform and infrastructure incidents, driving end-to-end resolution and customer communication.
- Led cross-functional collaboration with SRE, Product Engineering, Delivery, and TAM teams to resolve critical customer issues and improve platform reliability.
- Conducted root cause analysis (RCA) for recurring incidents and implemented preventive measures to reduce future occurrences.
- Authored and maintained operational runbooks, troubleshooting guides, and knowledge base articles to improve team efficiency and consistency.
- Provided technical mentoring and onboarding support to engineers through structured knowledge transfer sessions and case reviews.
- Coordinated high-priority customer escalations, balancing customer impact, operational risk, and SLA commitments.
- Provided daily operational guidance to support engineers and helped maintain high standards for case quality and customer communication.
- Led medium-sized technical initiatives from planning through execution, ensuring successful delivery and measurable operational improvements.
- Participated in technical interviews, onboarding activities, and skill assessments for new team members.
- Collaborated with leadership teams to improve support processes, knowledge management, and team performance metrics.
- Maintained 100% CSAT while resolving 20+ customer cases per month with zero SLA violations.

Classic Cloud Operations

- Led monthly infrastructure maintenance and patching activities across AWS-hosted environments, ensuring platform security, compliance, and high availability.
- Managed critical AWS infrastructure changes, including EC2 retirement events and Load Balancer network access controls, ensuring uninterrupted customer access and service reliability.
- Drove cloud cost optimization initiatives by identifying and decommissioning unused resources, improving operational efficiency and resource utilization across non-production environments.

EDUCATION

Bachelor of Engineering (CS) at KLN Engineering College,
2014-2017

Diploma in CS
KLN College, Madurai
2011-2014

ACHIEVEMENTS

- Recognized as GGS Employee Champion – Q3 for outstanding customer support and operational excellence.
- Achieved 100% CSAT while maintaining consistent SLA compliance and high case closure rates.
- Secured Top 5 placement in the AI Surge Innovation Event for developing AI-driven workflow automation solutions.
- Received positive recognition from TAMs, peers, and leadership for proactive issue resolution and cross-functional collaboration.

ASPIRE SYSTEMS — OCT 2018 - DEC 2021

SENIOR ANALYST

- Automated infrastructure provisioning and application deployments with Ansible and Terraform, improving delivery speed by 20%
- Optimized AWS cost management by configuring lifecycle policies for S3 buckets and implementing auto-scaling groups continuous integration and delivery.
- Administered AWS Lambda configurations, storage utilization management, and certificate lifecycle governance to proactively mitigate operational and security risks.
- Deployed microservices to Kubernetes clusters, implementing scaling strategies that enhanced reliability under high traffic.
- Conducted server patching and secured systems using AWS patch manager, IAM roles, and security group policies.
- Coordinated with development teams to troubleshoot deployment issues and optimize application performance.
- Managed team roster schedules and shift allocations to ensure 24/7 operational coverage and optimal resource utilization.
- Built and maintained Jenkins and GitHub Actions CI/CD pipelines with automated validation gates and deployment approvals, reducing release failures and improving deployment frequency across the SDLC.
- Provisioned and managed AWS infrastructure (EC2, S3, IAM, VPC, CloudWatch, RDS) across dev//prod environments; enforced IAM least-privilege and VPC security groups to meet cloud security and compliance requirements.

AVIKA TECHNOLOGIES — OCT 2017 - OCT 2018

NETWORK SUPPORT ENGINEER

- Monitored and resolved server performance issues using Nagios and PRTG, ensuring 99.9% uptime across critical systems.
- Managed and configured Cent Linux Os User and privileges.
- Set up and configured Linux environments, including LVM management.
- NFS and Samba shares, supporting a user base of 200+
- Conducted server hardening and kernel patching to improve security and stability.
- Built and managed Hyper-V and VMware virtualized environments for development and testing purposes.

PROJECTS

- Designed and implemented a fault-tolerant CI/CD platform using Jenkins and Kubernetes, enabling zero-downtime deployments and reducing release risk across production environments.
- Integrated monitoring with Prometheus and Grafana, enabling real-time alerting and dashboards for application metrics.
- Cost Optimization and Scalability: Automated AWS infrastructure provisioning using Terraform, reducing cloud costs by 25%.
- Configured auto-scaling and load balancers to handle traffic spikes, maintaining optimal application performance.
- Developed and deployed custom Glean AI agents to automate daily knowledge retrieval, reducing time spent on manual information gathering and streamlining cross-functional workflows.
- With a team of 2, created a multi-CLI to install all functional CLIs in a single command.
